Company: Teladoc Health

Location: Argentina

Category: computer-and-mathematical

Teladoc Health is a global, whole person care company made up of a diverse community of people dedicated to transforming the healthcare experience. As an employee, you're empowered to show up every day as your most authentic self and be a part of something bigger – thriving both personally and professionally. Together, let's empower people everywhere to live their healthiest lives.

The Opportunity

Teladoc Health is transforming how people access and experience healthcare. Recognized as the world leader in virtual care, we are partnering with over a thousand clients to serve millions of people around the globe every day. Teladoc Health offers a whole person virtual care platform that empowers all people everywhere to live their healthiest lives by transforming the healthcare experience, from acute and primary care to chronic care, mental health, and specialty care.

Our team of data engineers aggregate and transform substantial amounts of health data and information to support actionable, personalized, and timely health signals for our members. This approach delivers better clinical and financial outcomes while creating a different and better healthcare experience for people everywhere. The applicant should have a strong interest in the interface between real-time and reporting systems, pulling data from multiple sources into central data storage, and collaborating with internal teams to help provide for their data needs.

About You

You flourish in a fast paced and highly collaborative team environment. You are a quick

learner and have the expert ability to prioritize tasks efficiently, while delivering high quality work. You understand that solutions provided by a Data Engineer support in empowering an organization's business in decision making. You will be part of a great working atmosphere, performing complex work in a collaborative team of amazing people, with forward-thinking managers. You will have the opportunity to make an impact.

Responsibilities

Data is significant at Teladoc and our data engineers design and develop data pipelines to integrate data across disparate systems and create tools and data sets to support data science.

Wrangle and normalize medical and pharmacy claims, patient, provider and eligibility data coming in from multiple insurance companies in different file formats including, but not limited to delimited files, EDI X12 formats like 834, 835, 837, CCDA and HL7.

Build and maintain numerous metrics related to population health and risk scores.

Build production-grade data pipelines using Spark on the Azure stack.

Perform continuous integration to ensure that every step of a data pipeline is testable and automated.

Collaborate closely with Teladoc Health's ML experts, Data Scientists, Product Managers, and clinical researchers to define, analyze, and provide data that contributes to our mission of total health for our members.

Maintain data quality and fidelity in production systems.

Document code, provide progress reports, and perform code review and peer feedback.

Track milestones, activities and inter-dependencies across projects and tasks, with frequent status updates to stakeholders.

Continuously evaluate and identify improvements in system processes and architecture.

Participate in Agile planning around data feature requests and advocate for the best data engineering practices in priority planning.

Candidate Profile

Bachelor's degree in Engineering, Computer Science, Information Technology or a related field.

Good understanding of patient, provider, eligibility data.

Understanding of flat files from payors. Understanding of different EDI X12 formats like 834, 837, CCDA and HL7.

Good understanding of claim (medical and pharmacy) revision and reversal workflows.

Understanding of FHIR data models.

2+ years' experience in software development/engineering/data analysis.

Understanding of different file formats like delta, parquet, AVRO.

Experience with big data technologies, with skills in data processing using Spark.

Experience in creating and maintaining metadata driven production data pipelines using a cloud stack.

Strong SQL development experience (Postgres/MySQL/SQL Server/Oracle).

Expertise in Python (preferred), C#, Scala or Java.

2+ years of experience working in Azure or Databricks stack. Azure or Databricks certification is a plus.

Streaming data flow experience is desirable (Kafka).

Experience in deploying production pipelines in CI/CD environment.

Excellent communication skills, supporting recommendations, design ideas, and analysis to team and stake holders.

Experience in leading and guiding other data engineers.
