DevOps Engineer (Middle / Senior)

Apply Now

Company: Bitquery

Location: Argentina

Category: computer-and-mathematical

Bitquery is an API-first product company dedicated to power and solve blockchain data problems using the ground truth, on-chain data. Bitquery extracts and presents valuable data via APIs. These APIs are delivering solutions to multiple verticals like Decentralize Finance (DeFi), DEX Arbitrage Analytics, Crypto Surveillance & Forensics across all major blockchains like Bitcoin, Ethereum, EOS, Tezos.

We are an international company of developers of software for the analysis of decentralized data (40+ chains). Bitquery is a distributed team. Currently, are looking for a full-time DevOps engineer to further develop infrastructure, automation of various processes like software deployment, scaling and clustering.

Roles & Responsibilities

Creation of architecture, and documentation that will lead to consistent reliability, scalability, security, and performance of the 24/7 servers

Developing and maintaining technical infrastructure and system software components

Enhancing processes that allow for proper testing and validation of releases that goes from development to staging to production environments

Effectively interacting with other team members to accomplish shared projects

Stay up to date on the latest technology in our space

Requirements

5+ years of work experience implement, troubleshooting, and supporting infrastructure software and distributed systems

experience with cloud platforms (e. g. AWS)

scripting writing and modifying code experience to improve monitoring and automation

deep understanding of Docker, Docker Compose, Kubernetes, Helm Charts

experience in GitOps practices

TCP/IP networking knowledge, Linux architecture, p2p networks, micro-services and distributed systems

good at adapting to new tools, processes, and challenges

experience with set up and configuring blockchain nodes will be a plus

Our Tech stack:

Infrastructure: Bare-metal / AWS

Databases: Clickhouse / MySQL

SCM: git / github

Message broker: Kafka

Repository: Nexus

CI/CD: Jenkins

Monitoring: Icinga 2, Grafana, Prometheus, Victoria metrics, ELK

Orchestration: k8s, Ansible, Terraform

Containers: LXC, Docker

Scripting: Python, Golang, Ruby, Groovy

OS: Debian/Ubuntu

Others: Docker compose, IPSec

Benefits

Opportunity to work & collaborate with a truly global team spread across 5 countries

Work from anywhere in the world

Choose your own work hours

Yearly trip with Bitquery team to any remote destination

A promise to finish the interview processes within 1-2 weeks

Being a startup we take decisions & move fairly fast, while giving candidates great experience with the interview process. We have a flat hierarchy in the organization where we empower individuals and provide an opportunity to deliver results as per his/her working style. Come and join a great culture and build Bitquery with us.
