Senior Full Stack Developer (Python+JS)

Apply Now

Company: Sigma Software

Location: Argentina

Category: computer-and-mathematical

Overview

Required skills

Python / expert JavaScript / expert Snowflake / good Imply / good

We're in search of an experienced Senior Full Stack Developer ready to significantly impact the product development of our groundbreaking Defense Platform. This platform is set to revolutionize the economics of cybercrime and we're thrilled about its possibilities.

Exciting, isn't it?

We hope you can join us in that mission!

Customer

The company was founded in 2012 in Brooklyn. Our humble beginnings led to the creation of the Defense Platform, the backbone of all our products that safeguards enterprises from sophisticated bot attacks, fraud, and account abuse. Today, we verify the humanity of more than 20 trillion interactions per week for some of the largest companies and internet platforms.

Project

You'll join us at an exciting moment in our product story: we joined forces with two big companies in a market-changing merger. Together, we will disrupt the economics of cybercrime. We hope you can join us in that mission.

Requirements

Requirements

5-7+ years of experience with Python

Ability to develop UIs using Javascript and HTML

Experience with Snowflake, SQL, and non-relational databases

Experience with Imply

Familiarity with web crawlers and ETL pipelines

Familiarity with developing UIs for internal tools

Familiarity with developing solutions in cloud providers like AWS and GCP

At least an Upper-Intermediate level of English

Personal Profile

Strong problem solver. You like a challenge and get excited when details are limited, and you can help influence the direction of the solution

Self-driven and motivated

A visionary thinker with an eye for quality solutions

Able to work independently

Passionate about leveraging technology to solve complex problems

Responsibilities

Responsibilities

Develop solutions to improve time to identify and prevent bots and malicious activity

Support internal Research teams with solutions that enable rapid identification of threats

Improve manual QA and release process with automation and CI/CD

Improve platform reliability through improved alerting and monitoring

Evaluate system operating requirements and look for opportunities to reduce cost

Partner with stakeholders from Product, Customer Success, Research, and Ops teams to gather requirements and propose solutions
