Senior Ruby Software Engineer (AdTech)

Company: Sigma Software

Location: Argentina

Category: computer-and-mathematical

Overview

Required skills

Ruby / expert RoR / expert Backbone.js / good

We are looking for a talented and experienced Senior Ruby Software Engineer who will join our dynamic Advertising and Media team!

Our customer is a leading digital technology company specializing in maximizing revenue and simplifying operations for publishers. Our innovative ad monetization and video player solutions empower publishers to effectively monetize their content across various platforms. The ideal candidate will be pivotal in developing and maintaining our ad-serving platforms and data analytics tools, ensuring high performance, scalability, and reliability.

If it's all about you and you want to become a part of our stellar team, let's try!

Customer

Our customer is a leading digital technology company specializing in maximizing revenue and simplifying operations for publishers. Our innovative ad monetization and video player solutions empower publishers to monetize their content effectively across various platforms.

Project

Our customer's product is an innovative platform designed to seamlessly integrate advertising with clients' products, enabling them to maximize ad revenue and enhance overall business efficiency.

In close collaboration with the customer's team and actively exploring new features, you will play a pivotal role in enhancing the platform for optimal efficiency.

As a key member of the team, your responsibilities will include:

Designing and implementing robust back-end and front-end solutions using Ruby and JavaScript Introducing new features to enrich the existing platform Enhancing the performance of the current software while upholding high code quality standards

Requirements

Requirements

4-5+ years of professional software development experience with Ruby and RoR

Familiarity with RoR upgrades, particularly transitioning from version 4 to 5, showcasing the ability to manage and execute seamless version transitions

Experience writing and communication with backend services using RESTful APIs, gRPC, or messaging-based systems

Experience using Git for version control

Excellent problem-solving skills, attention to detail, and ability to work in a fast-paced, collaborative environment

Strong communication skills and ability to articulate technical concepts effectively

Would be a plus

Experience with Backbone.js

Knowledge of SQL

Experience with AWS

Passion for following SOLID Design Principles

Experience in the AdTech industry

Personal Profile

Self-driven and motivated

A visionary thinker with an eye for quality solutions

Able to work independently

Passionate about leveraging technology to solve complex problems

Responsibilities

Design, develop, and maintain efficient and reliable web applications using Ruby and Ruby on Rails

Drive the Ruby on Rails (RoR) upgrade process, ensuring smooth transitions and optimizing performance for increased application efficiency

Provide architectural input when designing new features, with an eye toward fault tolerance and low latency

Maintain high code quality standards, including tests and documentation, and encourage the same by providing constructive code reviews to collaborators

Troubleshoot, debug, and resolve technical issues to ensure the smooth functioning of web applications

Take active ownership of the product and improve the customer experience by forming effective collaborations with Product Management, Testing, Data Engineering, and other key disciplines

Work closely with other engineers to investigate design approaches, prototype new technology, and evaluate the technical feasibility of new features
