

Senior Site Reliability Engineer (Adtech)

Apply Now

Company: Sigma Software

Location: Argentina

Category: computer-and-mathematical

Overview

Required skills

Linux / expert AWS / expert Kubernetes / expert English / strong

We have an excellent opportunity for a bright, smart, and highly motivated Senior Site Reliability Engineer to join our mature project team.

You have a unique chance to become part of our team and work with best practices and methodologies. You will have the opportunity to lead and perform at your best.

Customer

Our customer is Beeswax (<https://www.beeswax.com/about/>), a rapidly growing US AdTech company. Founded by three former Google specialists, it has a highly technical team and an excellent technological culture.

Beeswax provides extremely high-scale Bidder-as-a-Service solutions in advertising technology, works with global businesses, and has raised \$28M (including the most recent Series B raise of \$15M) to date.

Sigma Software works with Beeswax to provide numerous key components of the platform. It is looking for engineers to complement the Beeswax engineering team and drive further platform development.

Project

We're seeking a skilled Senior Site Reliability Engineer responsible for the Cloud Infrastructure and Observability solutions for the Client's platform and ensuring all systems run smoothly. If you're passionate about complex tasks, optimizing systems, driving

innovation, providing the highest quality, and collaborating with top talent, this is the perfect opportunity. The project is an easy-to-use, massive-scale, and highly available demand-side platform. Backed by Amazon Web Services and Kubernetes, the team has embraced Infrastructure as code to manage thousands of applications, servers, and containers running in multiple regions worldwide.

Bring your expertise to our dynamic and forward-thinking environment!

Requirements

Requirements

Bachelor's or higher degree in computer science, computer engineering, relevant technical field, or equivalent practical experience

Experience in designing, analyzing, and troubleshooting large-scale distributed systems

At least 6 years of administration experience with Linux, AWS, and Kubernetes

At least 6 years of experience in configuration management using Cloud Formation, Terraform, and Ansible or similar

At least 6 years of experience coding in higher-level languages, such as Python, Java, or C++

Strong problem-solving skills

Strong verbal/written communication skills

At least an Upper-Intermediate level of English

Responsibilities

Responsibilities

Design and build infrastructure and tooling to provide high scalability, reliability, and sub-second performance levels using security industry best practices

Write code and scripts to support Infrastructure as code (IaC), configuration management, and automated incident resolution

Support and extend the observability stack to capture and alert on any system issues

Participate in on-call rotations and be an escalation contact for service incidents

Write systems documentation, troubleshoot playbooks, and other instruction manuals

Other duties and responsibilities as assigned
