

SRE Engineer

[Apply Now](#)

Company: SA Technologies

Location: Buenos Aires

Category: computer-and-mathematical

Role : SRE Engineer --REMOTE

Locations :Remote

Duration : Long Term Contract

PositionSummary

Our client is looking for an experienced SRE Engineer to work in their platformreliability team. The Platform is composed of Mobile SDKs,Web Apps, Ad and Back-End services. Their tech stack is composed of a mixof .NET, Kotlin, Java, and Golang microservices running onKubernetes in Azure. Understanding how to scale multi-tenant mobileapplications and high-performance infrastructure is critical to a successfulperformance, we are interested in engineering talent that is versatile andhas the intellectual curiosity to learn new things and find the best tools tosolve our problems.

Responsibilities Include

Design and drive consensus for the operational infrastructure of our platform team. This includes how our microservices are provisioned, how they will run in test and production, how configurations and networking is managed per environment, and how all systems are monitored, supported, and scaled in production.

Partner with Platform and Professional Services engineering stakeholders to identify operational needs and deliver solutions as part of the infrastructure.

Write, deliver, and maintain infrastructural services that can be used by directly by development

teams, including documentation and support materials.

Establish and reinforce healthy software engineering practices – including code quality, continuous delivery, and automated testing.

Aggressively automate all the things and make it easy to do the right thing when it comes to security, reliability, and resource management using GitOps principles. Drive the automation from build Pipelines (Azure DevOps/ Github actions), Kubernetes operators (Flux/Argo) and scaling via KEDA.

Mentor and force multiply other members of the engineering team.

Ensure the uptime and scalability of systems through best practices such as auto-healing and circuit breaking.

Be a trusted on call support engineer as part of a rotation

Other related duties as assigned.

Required Qualifications:

BS or MS in Computer Science / Engineering or relevant work experience

8+ years of professional experience in software development

Experience with Kubernetes, GitOps, and Infrastructure as Code

Experience operating distributed systems and highly available backend services.

Demonstrated ability to be analytical and have strong problem-solving skills.

Excellent communication, collaboration skills, and a strong teamwork ethic with both technical and non-technical audiences

Proficient in building non trivial applications in Python or Go for infrastructure concerns.

Experience working with Azure, and preferably AKS.

Strong understanding of modern software engineering practices, including logging, monitoring, continuous integration/deployment, infrastructure as code, and automated testing practices

Proven Success operating in production Azure or similar cloud-native deployment and operational contexts, including Kubernetes, Pulumi/Terraform, and Open Telemetry/Grafana/New Relic/Datadog

Preferred Qualifications:

Azure Kubernetes Service (AKS)

Kubernetes Service Mesh

Terraform

E-commerce or Retail experience

Experience designing and deploying infrastructure automation for use by multiple application development teams.

Experience running Kubernetes workloads in multiple cloud regions
