

Argentina Jobs Expertini®

SRE/ Site Reliability Engineer (Middle / Senior)

[Apply Now](#)

Company: Bitquery

Location: Argentina

Category: computer-and-mathematical

Bitquery is an API-first product company dedicated to powering and solving blockchain data problems using ground truth, and on-chain data. Bitquery extracts and presents valuable data via APIs. These APIs are delivering solutions to multiple verticals like Decentralize Finance (DeFi), DEX Arbitrage Analytics, Crypto Surveillance & Forensics across all major blockchains like Bitcoin, Ethereum, EOS, and Tezos.

We are an international company of developers of software for the analysis of decentralized data (40+ chains). Bitquery is a distributed team. Currently, are looking for a full-time SRE engineer to further develop/monitor/support the infrastructure, and automation of various processes. Also, you can be on duty with shift time.

Roles & Responsibilities:

Ensuring the smooth operation of software, environments and company services

Analyzing and improving the performance and availability of products

Identification of bottlenecks in the architecture and in the infrastructure

Improvement of system alerting and incident management

Improvements of the monitoring systems based on SLI (Prometheus, Icinga, Grafana etc.)

Formalization of SLI under the main business requirements

Formation of SLO for services and infrastructure in general

Minimization of system recovery time (RPO and RTO)

Analysis of incidents in the prod environment

Capacity management

Requirements

5+ years of work experience implementing, troubleshooting, and supporting infrastructure software and distributed systems

Support experience software in Golang, python , Ruby

Worked with virtualization and containerization technologies (containerd, docker, k8s) for more than 2 years

Set up CI of varying complexity (Jenkins) with CD to different environments

Experience in creating and maintaining a fault-tolerant system, with log coverage, monitoring, and alerting

Understanding the principle of infrastructure as code and the ability to test it (Ansible Terraform)

Principles of organizing network security (IPsec, WAF, IPS)

Experience with maintenance of blockchain nodes

Availability in US timezone is required

Our Tech Stack:

Infrastructure: Bare-metal / AWS

Databases: Clickhouse / MySQL

SCM: git / GitHub

Message broker: Kafka

Repository: Nexus

CI/CD: Jenkins

Monitoring: Icinga 2, Grafana, Prometheus, Victoria metrics, ELK

Orchestration: k8s, Ansible, Terraform

Containers: LXC, Docker

Scripting: Python, Golang, Ruby, Groovy

OS: Debian/Ubuntu

Others: Docker compose, IPsec

Benefits

Opportunity to work & collaborate with a truly global team spread across 5 countries

Work from anywhere in the world

Choose your own work hours

Yearly trip with Bitquery team to any remote destination

A promise to finish the interview processes within 1-2 weeks

Being a startup we take decisions & move fairly fast, while giving candidates great experience with the interview process. We have a flat hierarchy in the organization where we empower individuals and provide an opportunity to deliver results as per his/her working style. Come and join a great culture and build Bitquery with us.
